                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Receptor protein tyrosine kinase assays can be used to identify inhibitors of receptor tyrosine kinases which can be utilised for inhibiting vascular permeability or for preventing angiogenesis e.g in tumour therapy; or the assays can be used to identify activators of receptor tyrosine kinases which can be used to induce vascular permeability or to enhance angiogenic activity, e.g., in wound healing. This mutant vascular endothelial growth factor is a truncated protein. It is a receptor agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                  The present sequence represents mouse vascular endothelial growth factor designated VEGF115.

                                                                                                                                                                                                                                                                                                                                                                                                                 Receptor protein tyrosine kinase assays can be used to identify inhibitors of receptor tyrosine kinases which can be utilised for inhibiting vascular permeability or for preventing angiogenesis e.g. in tumour therapy; or the assays can be used to identify activators of receptor tyrosine kinases which can be used to induce vascular permeability or to enhance angiogenic activity, e.g., in wound healing. This mutant vascular endothelial growth factor comprises a K73S substitution and was identified in an assay involving the receptor protein neuroepithelial tyrosine kinase (NYK). It is a receptor agonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mus

This mutant vascular endothelial growth factor comprises an H111G substitution and was identified in an assay involving the receptor protein neuroepithelial tyrosine kinase (NYK). It is a receptor agonist.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         identify activators of receptor tyrosine kinases which can be used to induce vascular permeability or to enhance angiogenic activity, e.g., in wound healing truth and to enhance angiogenic activity, e.g., in wound the comprises a G117V substitution and was identified in an assay involving the receptor protein neuroepithelial tyrosine kinase (NYK). It is a receptor agonist.
Receptor protein tyrosine kinase assays can be used to identify inhibitors of receptor tyrosine kinases which can be utilised for inhibiting vascular probability or for preventing anglogenesis e.g in tumour therapy; or the assays can be used to identify activators of receptor tyrosine kinases which can be used to induce vascular permeability or to enhance angiogenic activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Receptor protein tyrosine kinase assays can be used to identify inhibitors of receptor tyrosine kinases which can be utilised for inhibiting vascular permeability or for preventing angiogenesis e.g in tumour therapy; or the assays can be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          8
                                          The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

This mutant vascular endothelial growth fact comprises the following substitutions: K109R, P110S, H111G, Q112D, S113R, Q114P and H115S. It was designated VEGFO and was identified in an assay involving the receptor protein neuroepithelial tyrosine kinase (NYK). It is a receptor agonist.

                                                                                                               Multiple cDNAs encoding alternative forms of the VEGF A-subunit were amplified using PCR primers as in AAQ23049 and AAQ23050. Three sets of clones were identified. Clone #12 encoded the 164 amino acid secreted form of VEGF A-subunit (see AAR22347). Clone #14 has a 135 bp deletion and thus encodes a 120 amino acid form and Clone #16 has a 72bp insertion and encodes a 188 amino acid mature protein (AAR22351). The deleted region lies between the second base of the Asn140 codon and the third base of the Arg184 codon. The 120 amino acid mature protein has Asn140 converted to Lys140. See also AAQ23038-Q23059.
                                                                                           Sequence
                                                                                                                                                                                                                                            Example 9; Page 14 and Fig 4; 38pp; English.

                                                                                                                         The full length coding region of the A subunit or monomer of VEGF CC is determined from three sets of overlapping cDNA clones. Degenerate coligo. primers based on the amino acid sequences Phe-Met-Asp-Val-Tyr-Gln from polypeptide L42 (residues 42-47) and CC Cys-Lys-Asn-Thr-Asp from polypeptide T38 (residues 164-168) were used CC Cys-Lys-Asn-Thr-Asp from polypeptide T38 (residues 164-168) were used CC coligon of the cDNA for VEGF A chain. CC A single band migrating at 420 bp was gel purified, digested with Sall, CC ligated into pGEM3Zf(+) and sequenced. The nucleotide sequence CC cobtained (p42-38) was used to design antisense and sense PCR primers CC cobtained (p42-38) was used to design antisense and sense PCR primers CC are denoted p5-15 and gw3, respectively. In addition to the cDNA CC coding the 164 amino acid secreted form identified by protein CC sequencing, two alternatively spliced cDNAs encoding a 146 amino acid comms are cloned and sequenced. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a rat vascular endothelial growth factor II (VEGF II) A subunit variant with a conversion of Asn 140 to Lys 140, and the deletion of His 141 to Arg 184 from the wild-type given in AAW53639. The present invention describes: (1) a mammalian VEGF II protein comprising an A subunit from AAW53640, and as Subunit from AAW53638, AAW53639, AAW53641, and a B subunit from AAW53638, AAW53639 or the first I15-135 amino acids of AAW53638; and (2) a mammalian VEGF comprising a heterodimer or homodimer of B subunits. The growth factor is used for promoting vascular development and repair and for promoting tissue repair.

N.B. The present sequence is not given inthe specification but is derived from Fig 5 as stated in the claim.

The invention relates to a purified and isolated VEGF C subunit amino acid sequence AAY57025. VEGF exists in various microheterogenous forms, and is useful for the promotion of vascular development and repair. The invention also relates to human VEGF heterodimers AC or BC and homodimer CC, where A, B and C are subunit amino acid sequences. The VEGF AC, BC or CC amino acid sequences can be used in a tissue repairing pharmaceutical composition. The novel growth factors are useful for the production or coverage of artificial blood vessels with vascular endothelial cell. They are also useful for the induction of tissue growth and repair.
                        Human vascular endothelial cell growth factor (VEGF) C subunit DNA protein, useful for promoting vascular development and repair, and promoting tissue repair, especially for treating wounds in mammals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention is concerned with the human vascular endothelial growth factor (VEGF) C subunit. VEGF is a vascular endothelial cell mitogen and can be used to promote vascular development and repair. The C subunit may exist as a homodimer or a heterodimer with the VEGF A or B subunit. VEGF can be used in the treatment of wounds of mammals, to cover artificial blood vessels with vascular endothelial cells, in the production of artificial blood vessels and to induce tissue repair or
                                                                                        Sequence
                                                                                                          GDGF stimulates mitogenesis and vascular endothelial cell growth, useful in promoting wound healing or tissue growth. It allows vascular explants to be grown on a GDGF treated surface for implantation in a host. The sequence was isolated from the GS-9L rat cells.
                                                                                                                                                                                                  Glioma-derived growth factor - stimulates mitogenesis of mammalian endothelial cells and is used in vitro or in vivo
                                                                                                                                                                                                                                                                                                                  30-MAR-1990;

                                                                                                                    The VEGF-I A-subunit was found to be identical to the VEGF-II A-subunit. The isolated A-monomer was treated with trypsin, CNBr, Lys C or V8 protease. The peptides resulting from the digestions were isolated and sequenced using the Edman degradation reaction in a gas phase sequenced. In addition to the peptide fragments which were directly sequenced, the full-length protein sequence was deduced from the CDNA encoding it.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein At2g40920 [imported] - Arabidopsis thaliana
N;Alternate names: hypothetical protein T20B5.12
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 12-Reb-1999 #sequence_revision 12-Feb-1999 #text_change 16-Feb-2001
C;Accession: T00756; E84835
R;Rounsley, S.D.; Lin, X.; Ketchum, K.A.; Crosby, M.L.; Brandon, R.C.; Sykes, submitted to the EMBL Data Library, November 1997
A;Bescription: Arabidopsis thaliana chromosome II BAC T20B5 genomic sequence.
A;Reference number: Z14159
A;Accession: T00756

Kawabata H., Uto N., Oka T., Maruyama I., Sakamoto H.;

"Cloning of cDNA and high-level expression of equine vascular

endotherial growth factor (VEGF).";

submitted (JAN-2001) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: Growth factor active in angiogenesis, and endoth

cell growth. Induces endothelial proliferation and vascula

permeability (By similarity).

-I- SUBUNIT: Homodimer; disulfide-linked. Also found as hetero
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CHAIN

Vascular endothelial growth factor A precursor
                                                                                                                                                                                      gene.";
Submitted (NOV-2000) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: Growth factor active in angiogenesis, vascuendothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoperation of blood vessels. It binds to the parameter of the paramete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DISULFID
